Planning Sheet

**Planning for get_coin()**

The function `get_coin()` asks the user for the value of a coin. If the user enters a blank or impossible coin value, the program reports that problem and asks again. This is a good use of the `while()` loop. Answer these questions:

- **purpose of loop:**

- **continue condition:**

- **body of loop:**

**Planning for get_payment()**

The function `get_payment()` asks the user to pay for the item. The function calls `get_coin` to get a coin. If that is not enough, the function calls `get_coin` again, and then again and again. This repetition is a good use of the `while()` loop. Answer these questions:

- **purpose of loop:**

- **continue condition:**

- **body of loop:**
