The Software Engineering Institute ([www.sei.cmu.edu](http://www.sei.cmu.edu)) is doing applied research on Architecture Competence at the individual, team, and organization levels. Part of this research involves preparing a customized assessment questionnaire for each client, created by selecting questions from a repository. We are looking for a web-based (intranet) application that would allow us to rapidly create an assessment questionnaire for a client, and to record and report on results. We envision an application built using Ruby on Rails on top of a MySQL database, deployed in a Linux virtual machine using VMWare Server.

Sponsor: John Klein, Senior Member of Technical staff at the Software Engineering Institute. John is based in Dracut, MA, and will be available to work face-to-face with the project team. He joined SEI in 2008, after spending 6 years as Chief Architect for Communications Applications at Avaya. Prior to Avaya, he worked as a chief architect for startups in Silicon Valley and New England.
