Mind Haul Enterprises

Come work for a web app/software start-up! We are small and new and work out of a local basement, but we are going to bring the smack down on the world soon enough (and I really do mean sooner rather than later). We have a handful of modular projects that need some doing, so find the one that is most interesting to you and get on board. To be totally up front: we're looking for smart, skilled, creative, enthusiastic, and adventurous souls to get involved early and at least ponder the notion of *continuing* to work with us to make this beast exceptionally awesome well into the future. You clearly don't have to commit to post Comp-190 involvement but I'm confident the thought will bounce around anyone's head that helps out.

In addition to working on one of the following projects, you will be coordinating and cooperating with your peers (contingent on interest level of course) as well as seasoned software engineers working on other related projects.

While each project is complex it is absolutely doable within the confines of Comp-190. In signing up, please indicate which project you would like to work on (or your preference order if you're interested in multiple). Thanks for your interest, and I look forward to working with some of you all soon.

- Ethan Stillman, CEO

Project A

Features:

- Creative data visualization
 - The cooler the better
 - Does need to hold out the possibility of being useful to society though
- Trend tracking
- More traditional data analysis and presentation concepts

Project B

Features:

- Designing a security system
- ID verification procedures
- Working with cool voice analysis software (possibly)

Project C

Features:

- Widget building
- All sorts of content aggregation
- Full license to go totally crazy with it

Project D

Features:

- Constructing an advertisement placement system
- Advertisement effectiveness analysis
- Creative data visualization (different data though from Project A)

Questions? Want to talk more about the projects? Want to scope us out?
